- Best in Design (Front - End Mini Project 2)
- Best in Capstone (Capstone Project)

## Expertise

- JavaScript, Bootstrap, CSS, HTML, PHP and React
- Analytical thinking
- Resolving technical issues
- Communication skills
- Teamwork
- Adaptability
- Creativity

## Projects

### Hospital Management System

1. Built a functional and a friendly-user full-stack website that allow patients to locate doctors of their own choices and has an option to set up an appointment for their upcoming consultations.
2. This website has an Admin Dashboard where we used PHP, Xampp and Laravel to maintain the users and the doctors account and added functions to approve/decline the appointment of the patients.
3. We also used React and JavaScript for the search-engine to easily find the doctors of your choices that contains the doctors profile.

### Strap Store

1. Developed an operational and minimalist front-end website that allow costumers to pick a high-end quality of t-shirts.
2. We used JavaScript for the search-engine for the customers to explore and pick the items that customers preferred.
3. Used HTML, CSS, JavaScript and Bootstrap for the check-out form, payment method and place-order function and a feature that once order placed you will be provided by a tracking number for your delivery.

## Education
